Clearview Advanced, Corporate Reporting

Corporate Reporting is the key tool for upper management to efficiently run their business. These reports analyze past data and give information for key decisions in the future of your business. Through dashboards that are completely scalable and edited for upper management to see an overall picture of one division of the company or compare multiple divisions. From this same graph, it allows executives to drill down to one specific event, ie. Driver, customer, dispatcher, order, etc. MS SQL Reporting Service 2008 is the future of reporting and now available to the construction materials industry.

Features:

- ◆ Modeling to determine customer, sales, and plant scoring
- ◆ Ratings automated or fine-tuned to your companies specific needs.
- ◆ Track individual safety and driver utilization records
- ◆ Compare customers to council and assist for future work
- ◆ Customer Matrices
- ◆ Profitability Reports
